(54) Title: **BARKER CODE DETECTOR**

(57) Abstract: Apparatus for determining whether or not a received data sequence is Barker spreaded, comprising sampling means (10) for sampling the received sequence, a Barker correlator (12), means (14) for determining the magnitude of the correlation result, filter means (16) for filtering the correlation results to create a data set consisting of the correlation result of K subsequent data bits, where K is a quality parameter and comprises an integer greater than 1, means (20) for deriving a parameter L by determining the difference between a maximal correlation result and a minimal correlation result normalized by the minimal correlation result, and means (22) for comparing L with a predetermined threshold value to determine if the received signal is a Barker spreaded sequence.
